RBC Bearings Incorporated (RBC Bearings, RBC) has had a long tradition of innovation, commitment, and quality since the company was founded in 1919. Today, RBC Bearings has grown into a world-class manufacturer of standard and custom-engineered bearings and related products, with a product focus on research, testing, and development of the best product for specific applications.

What We Manufacture

RBC Bearings, with facilities throughout North America and Europe, provides bearings and precision products for applications in the construction, mining, material handling, transportation and off-highway equipment, robotics and automation, farming, machine tool, and semiconductor equipment industries. Through RBC Aerospace Bearings, the company is a major manufacturer of highly-engineered bearings and precision products for military, defense, and commercial aerospace applications.

RBC's high-quality bearings include:

- **Heavy Duty Needle Roller Bearings** - Pitchlign® caged heavy duty needle roller bearings, inner rings, type TJ TandemRoller® bearings for long life.
- **Spherical Plain Bearings** - Radial, angular, contact, high misalignment, extended inner ring, DuraLube™ maintenance-free spherical plain bearings, QuadLube® long life bearings, ImpactTuff® case carburized bearings, ShimPack® double-acting angular contact bearings, CrossLube® lubrication groove systems, and SpreadLock® Seal.
- **Cam Followers and Yoke Rollers** - Standard stud, heavy stud, yoke type, caged roller followers, RBC Roller® long life cam followers, HexLube® universal cam followers, airframe track rollers. Mastguide rollers and carriage rollers, chain sheaves (for leaf chain), toothless sprockets (for roller chain), and heavy-duty roller bearing construction.
- **Rod Ends** - Commercial and aerospace, precision, Mil-Spec series, self-lubricating, inch and metric. Heim®, Unibal®, and Spherco® brands.
- **Self-Lubricating Bearings** - Radial, thrust, rod ends, spherical plain bearings, high temperature, high loads, inch and metric. Fiberglide®.
- **Thin Section Ball Bearings** - Standard cross sections to one inch. Sizes to 40 inches. Stainless steel and other materials available. Seals available on all sizes and standard cross sections.
- **Airframe Control Bearings** - Ball bearing types, self-lubricating types, needle roller track rollers.
- **Ground, Semiground, and Unground Ball Bearings** - Full complement, utilizes design and burnished races for higher loads, long life, and smooth operation.
- **Dowel Pins, Loose Needle Rollers, Shafts**
- **Tapered Roller Bearings** - Case-hardened and through-hardened in a variety of sizes, used in Class 8 heavy truck and trailer wheel bearings, final drive transmissions and gear boxes.
- **Tapered Roller Thrust Bearings** - Case-hardened. Sealed and unsealed for truck, tractor, and construction equipment steer axles, and Class 8 trailer landing gear.
- **Custom Designed Bearings** - RBC produces a wide range of custom bearings in various materials for specific applications.

Nice Precision Ground Product

In 1902, William Nice founded one of the first "anti-friction" bearing manufacturing plants. Starting with unground ball types and developing into the ground field, Nice today produces a complete line of precision ground, semi-ground, and unground bearings and bearing assemblies. They are made in easy-to-use inch dimensions and are recommended for medium loads with speeds up to 5000 rpm. They are available with nylon retainers as standard with steel and stainless steel retainers optional. They are also available with a variety of seal and shield combinations. Metric ball bearings are also made for customers with special requirements. Focus industries for Nice Ball Bearings include the automotive, agricultural, lawn equipment, semiconductor, medical and material handling markets.

Nice Unground Industrial Product

Nice Ball Bearings produces a complete line of unground radial, thrust, and combination radial and thrust ball bearings for applications where the speeds are low and the precision of a ground bearing is not cost effective. These are available with full ball complements, no retainer, and unitized assembly for ease of installation.

How We Can Serve You

RBC has implemented a total quality control system that uses statistical quality control at all facilities, and manufactures in high volume to a just-in-time program.

To serve the ongoing needs of customers, RBC has a network of over 2,400 distributors and sales engineers throughout North and South America and Europe, with authorized agents worldwide. For assistance with your bearing application, contact:

Customer Service - 800.390.3300

Warranty

RBC products are warranted for material and workmanship for a period not to exceed 90 days from shipment and for a value not to exceed purchase price. No other warranty is in effect.

PRODUCT Selection Guide

Nice® Ball Bearings, Inc., produces a full line of ground, semi-ground, and unground bearing assemblies. To choose the exact bearing you need, start with the Nice® line of standard inch-dimension, radial, angular contact and thrust ball bearings. Standard series bearings can be customized to include many features that can satisfy the demands of many special applications. They are available with special bores, modified outer ring shapes, extended inner rings, locking devices, and flanged housings. Standards can be ordered sealed, shielded, or open, and are offered in ground and semi-ground grades to deliver the most cost effective solution for your application.

If you are now designing with only ABEC-1 level or higher bearings, chances are there may be a more economical solution to your application. A Nice® application engineer can help you determine the exact precision your design requires, and show you how to take advantage of the savings, selection and special features available in our standard series. Even when a standard isn't the answer, our engineers can deliver an economical, modified standard design that is "fit for purpose."

Nice® Standard Product Line

Class	Series	Type	Ground Surfaces	Bore Range
Ground	1600™	(Retainer) Radial	Raceways Bore, O.D., Faces	3/16"-1 5/16" 4.76-49.21
	7500™	Radial		1/2"-1 1/4" 12.70-31.75

Modified Standards and Specials	All	Radial Retainer and Full Types Thrust Radial/Thrust	Any Combination	3/16"-2" 4.76-50.80

DESIGN

Three basic ball bearing types are illustrated to assist in proper design selection

1. Radial bearings are designed primarily to carry loads perpendicular to the axis of the bearing bore. They will also accommodate limited thrust loading or a combination radial and thrust load.

2. Thrust bearings carry loads applied parallel to the axis of the bearing bore. They are not designed to accommodate radial loads.

3. Combination radial and thrust bearings are designed for simultaneously applied thrust and radial loads. Combination assemblies will also carry pure thrust loading; however, they are not recommended for straight radial loads unless provisions are made to keep the inner rings and outer rings in proper contact with the balls.

Many sizes and types of the three basic designs illustrated are available for selection from this catalog. However, if you have an unusual application problem, Nice® field and factory engineers will be glad to give you the benefit of their specialized training and broad practical experience.

PRODUCT Features

Modified Standards

Modified standard bearings feature a standard cage and ball complement or a full ball complement, with custom engineered modifications to the other bearing components. The exact inner and outer ring dimensions and designs can be combined with a wide range of seals, shields, special greases, special materials and special finishes.

Modification instead of full customizing gives the user the benefits of a fully custom bearing with lower costs and faster delivery times. Prototype lots are readily affordable and available for testing and evaluation.

Modified standard bearings offer the greatest value for your bearing dollar by offering custom bearings at standard prices. Here are some of the many ways we can modify standard ball bearings to fit any application.

Inner Rings

A variety of bore shapes and sizes can be custom engineered to simplify mounting procedures, reduce assembly costs, and allow misalignment.

Outer Rings

Outer rings can be custom engineered to include milled slots, snap rings, track grooves, or even a variety of plastic tires. Add to this flanges or pulley units and a variety of custom solutions are readily available.

Materials and Finishes

Nice® has extensive experience with a variety of special materials and finishes developed to stand up to various contaminants or to take unusually hard wear. Nice® bearings are made from steels of various chemical compositions. Carburizing grades are case hardened to desired depths and hardness values for wear and breakdown resistance. High carbon chrome alloy steels are through hardened for high wear and fatigue resistance. Stainless steels are available for corrosion resistance and food service applications. Special platings and finishes such as zinc, black oxide, and thin dense chrome are available for special applications. Nice® application engineers can assist in bearing selection for special material applications.

1600 Series™ Precision Ground Radial Bearings

Precision ground 1600 Series™ bearings are specially designed to provide a line of low cost yet high quality bearings for adaptation to a majority of precision bearing applications. They are made in easy to use inch dimensions and are recommended for medium loads and for maximum speeds in the range of 5000 rpm.

The 1600 Series™ bearings are precision ground on all surfaces with exceptional care given to the ball grooves. Careful heat treatment provides a uniform and exact degree of hardness for maximum life. A ball retainer, or separator, is used to increase the range of allowable speeds by reducing ball-to-ball contact friction. The 1600 Series™ radial bearings are available open, single or doubled shielded, or single or double sealed. Double sealed and double shielded bearings are supplied grease packed as standard. Open and single closure bearings can be supplied greased on request.

3000 Series™ Semi-Ground Radial Bearings

Semi-ground 3000 Series™ bearings are specially designed to provide a line of economical bearings for lighter loads than the 1600 Series™ and speeds to approximately 2500 rpm. The 3000 Series™ bearings are dimensionally the same as the 1600 Series™ bearings, except for the precision of the inner ring (as machined tolerances). Careful heat treatment provides a uniform and exact degree of hardness for maximum life.

The 3000 Series™ bearings are precision ground to the same close tolerances on the O.D. as the 1600 Series™ with exceptional care given to the ball grooves. A ball retainer, or separator, is employed to increase the range of allowable speeds by reducing ball contact friction. The 3000 Series™ radial bearing is available open, single or doubled shielded, or single or double sealed. The double shielded and double sealed versions are grease packed as standard. Open and single closure bearings can be furnished with or without grease as desired.

3000 Series™ Semi-Ground Radial Bearings (con't)

Semi-ground 3000 Series™ bearings are specially designed to provide a line of economical bearings for lighter loads than the 1600 Series™ and speeds to approximately 2500 rpm. The 3000 Series™ bearings are dimensionally the same as the 1600 Series™ bearings, except for the precision of the inner ring (as machined tolerances). Careful heat treatment provides a uniform and exact degree of hardness for maximum life.

The 3000 Series™ bearings are precision ground to the same close tolerances on the O.D. as the 1600 Series™ with exceptional care given to the ball grooves. A ball retainer, or separator, is employed to increase the range of allowable speeds by reducing ball contact friction. The 3000 Series™ radial bearing is available open, single or doubled shielded, or single or double sealed. The double shielded and double sealed versions are grease packed as standard. Open and single closure bearings can be furnished with or without grease as desired.

6900

Series™ Semi-Ground Radial Bearings, Extended Inner with Flanged Housing

The 6900 Series™ consists of a double sealed, semi-ground bearing with an extended inner ring. It is provided with two set screws and a flanged housing designed for flush mounting. Bearings are supplied assembled in the housing. Flanged and non-flanged units are available from stock.

The pressed steel flanged housing provides a secure yet inexpensive means for holding the bearing in place. Although these units are not of the self-aligning type, they will accommodate a limited amount of angular misalignment.

7500 Series™ Heavy Duty Precision Ground Radial Bearings

The 7500 Series™ bearings are single row retainer type radial bearings, similar in construction to the 1600 Series™. They incorporate a highly effective single lip contact seal, with metal guard. The inner and outer rings are turned from chrome steel and after careful heat treatment the through hardened rings are accurately ground to close tolerances.

The 7500 Series™ bearings are recommended for applications requiring the accuracy of rotation and quiet performance of close tolerance precision grade bearings, and where a superior seal is required to retain lubricant and keep the bearing free from dust and dirt.

Normally double sealed (type DL), the 7500 Series™ bearings can be produced to order with seals on one side only (type SL) or without seals (type NL). Double sealed bearings are grease packed as standard; however, all types can be furnished with or without grease packing as desired. All types are provided with a snap ring groove, with the snap ring assembled on the bearing as an option.

7600 Series™ Heavy Duty Precision Ground Radial Bearings with Extended Inner Ring

The 7600 Series™ bearings are single row retainer type radial bearings similar in construction to the 1600 Series™. They incorporate a highly efficient single lip contact seal with metal guard. The inner and outer rings are turned from chrome steel and after careful heat treatment the through hardened rings are accurately ground to close tolerances. The inner ring is extended and contains set screws whereas the 7500 Series™ bearing does not.

The 7600 Series™ bearings are recommended for applications requiring the accuracy of rotation and quiet performance of close limit precision grade bearings, and where a superior seal is required to retain lubricant and keep the bearing free from dust and dirt.

Normally double sealed (type DL), the 7600 Series™ bearings can be produced to order with seals on one side only (type SL) or without seals (type NL). Double sealed bearings are grease packed as standard; however, all types can be furnished with or without grease packing as desired. All types are provided with a snap ring groove, with the snap ring assembled on the bearing as an option.

Series™ Heavy Duty Precision Ground Radial Bearings with Extended Inner Ring (con't)

- **PRECISION GROUND ON ALL CONTACT SURFACES, SIMILAR TO THE 1600 SERIES™**
- **EASY TO USE INCH DIMENSIONS**
- **MEDIUM LOADS**
- **MAX SPEED RANGE - 5000 - 6000 RPM**
- **THROUGH HARDENED**
- **CAGED DESIGN**
- **NYLON CAGE STANDARD**
- **DOUBLE SEALED STANDARD**
- **HIGHLY EFFICIENT SINGLE LIP CONTACT SEAL**
- **AVAILABLE SINGLE SEALED OR OPEN**
- **EXTENDED INNER RING WITH SET SCREWS**
- **ALL BEARINGS HAVE A SNAP RING GROOVE, SNAP RING ASSEMBLED AS AN OPTION**
- **RECOMMENDED FOR APPLICATIONS WHERE ACCURATE, QUIET PERFORMANCE AND SUPERIOR SEALING ARE REQUIRED**

7600 Series™ Heavy Duty Precision Ground Radial Bearings with Extended Inner Ring (con't)

The 7600 Series™ bearings are single row retainer type radial bearings similar in construction to the 1600 Series™. They incorporate a highly efficient single lip contact seal with metal guard. The inner and outer rings are turned from chrome steel and after careful heat treatment the through hardened rings are accurately ground to close tolerances. The inner ring is extended and contains set screws whereas the 7500 Series™ bearing does not.

The 7600 Series™ bearings are recommended for applications requiring the accuracy of rotation and quiet performance of close limit precision grade bearings, and where a superior seal is required to retain lubricant and keep the bearing free from dust and dirt.

Normally double sealed (type DL), the 7600 Series™ bearings can be produced to order with seals on one side only (type SL) or without seals (type NL). Double sealed bearings are grease packed as standard; however, all types can be furnished with or without grease packing as desired. All types are provided with a snap ring groove, with the snap ring assembled on the bearing as an option.

400 Series™ Single Row Unground Radial Bearings

The 400 Series™ of unground radial ball bearings are designed for moderate loads and speeds where running accuracy and noise level requirements do not warrant the more expensive precision ground bearings. This series of bearings feature a full ball complement without a retainer and a soft steel band on the outer ring. This permits the bearing to be pressed into a housing without the necessity of close housing tolerances. The bearings are designed for use in applications with speeds not exceeding 1200 rpm.

400 Series™ Single Row Unground Radial Bearings (con't)

The 400 Series™ of unground radial ball bearings are designed for moderate loads and speeds where running accuracy and noise level requirements do not warrant the more expensive precision ground bearings. This series of bearings feature a full ball complement without a retainer and a soft steel band on the outer ring. This permits the bearing to be pressed into a housing without the necessity of close housing tolerances. The bearings are designed for use in applications with speeds not exceeding 1200 rpm.

500 Series™ Single Row Unground Combination Radial and Thrust Bearings (con't)

The 500 Series™ of unground combination radial and thrust bearings are designed for applications where a pure radial bearing or a pure thrust bearing would be unsuitable. The 500 Series™ is an angular contact bearing designed for applications where thrust and/or radial load carrying capability is required.

600 Series™ Unground Thrust Bearings

The 600 Series™ is designed for moderate speeds and medium thrust loads. These bearings utilize a full ball complement. Rings are cold forged from hardenable strip steel and are carefully heat treated. These bearings may be plated or manufactured from stainless steel upon request.

The entire assembly is housed in a soft steel band which lends itself to an easy press fit into a housing. The band also serves as a dust shield and helps retain the bearing lubricant. The upper ring is free to rotate in the band and has a close fit in the bore for the shaft. The lower ring is fixed in the band and has a shaft clearance in the bore.

BEARING Engineering Data

The methods, equations, and technical data presented in this section allow the user to select the correct bearings and estimate their performance for a wide range of applications. These calculations apply to the Nice® selection of ground and semi-ground product lines, namely the 1600™, 3000™, 6900™, 7500™, and 7600 Series™. For applications with unusual operating conditions, Nice® can provide engineering assistance and recommend the most suitable bearing design.

Where standard bearings cannot be used, Nice® can meet the application requirements with a special bearing design specifically tailored for optimum performance. Contact your RBC sales engineer for special sizes, materials, application requirements, dimensions, and tolerances.

Capacity and Fatigue Life of Ball Bearings

The BASIC DYNAMIC LOAD RATING, C , or "dynamic capacity," for a ball bearing is that calculated, constant radial load at which a group of apparently identical bearings with a stationary outer ring can statistically endure one million revolutions of the inner ring.

The BASIC STATIC LOAD RATING, C_0 , or "static capacity," is that uniformly distributed load, which produces a maximum theoretical contact stress on the most heavily loaded ball of 609,000 psi. At this contact stress, a permanent deformation of ball and raceway occurs. This deformation is approximately 0.01% of the ball diameter in inches.

The RATING LIFE L_{10} , is a statistical measure of the life which 90% of a group of apparently identical ball bearings will achieve or exceed. For a single bearing L_{10} also refers to the life associated with 90% reliability. Median Life, L_{50} , is the life which 50% of the group of ball bearings will achieve or exceed. Median life is usually not greater than five times the rating life.

The relationship between rating life, load rating and load is:

$$L_{10} = (C/P)^3$$

with L_{10} = rating life (10^6 rev)
 C = basic load rating (lb)
 P = equivalent radial load (lb)

To obtain the rating life in hours, use:

$$L_{10 \text{ hrs}} = 16667/N * (C/P)^3$$

with N = speed (rpm)

The Equivalent Radial Load is defined as:

$$P = XF_r + YF_a$$

with F_r = radial load (lb)
 F_a = axial load (lb)
 X = see table below
 Y = see table below

For radial contact ball bearings calculate P with $X = 1.0$ and $Y = 1.0$. Then recalculate P with $X = 0.56$ and Y from the chart below. Use the larger value of P to determine L_{10} life.

$\frac{F_a}{nd^2}$	Y
25	2.30
50	1.99
100	1.71
150	1.55
200	1.45
300	1.31
500	1.15
750	1.04
1000	1.00

with n = number of balls
 d = diameter of balls

BEARING Engineering Data

Operating Temperature

Maximum recommended operating temperatures for Nice® ball bearings is a function of the bearing cage, seal, and grease materials used in the final assembly. For the Nice® standard precision product series (1600™, 3000™, 7500™, 7600™, ER, and 6900™) the maximum recommended operating temperature is 250°F (121°C). Operation at temperatures as high as 300°F (149°C) can be tolerated intermittently. When operating at the extremes of allowable temperatures, grease may purge out between the seal lip and the bearing inner ring. If this is unacceptable for a particular application, other design arrangements might be necessary.

Nice® full complement unground series (400™, 5000™, 500™, and 600™) can operate at higher temperatures than above, and will be limited only by choice of lubricant. However, Nice® engineering should be consulted for application verification.

Limiting Speeds

Limiting operating speed is dependent upon the materials used in construction and the internal design and finishing of the bearing. For the Nice® standard selection of ball bearings the recommended speed limits are as follows:

Bearing Series	Limiting Speed (rpm)
1600™	5000
3000™	2500
7500™	5000
7600™	5000
6900™	2500-3000
ER	5000
400™	1200
5000™	1200
500™	1000
600™	1000

Lubrication

All Nice® double sealed and double shielded precision ground bearings (1600™, 3000™, 7500™, 7600™, 6900™, and ER series) are supplied pre-greased 33% full with Shell Alvania #2 grease.

Shell Alvania #2 is a general purpose lithium soap grease with a useful temperature range of -40°F (-40°C) to +280°F (138°C). Single closure and open bearings are supplied slushed with a rust preservative. Nice® can supply bearings with a wide variety of greases by special order, some of which are listed below. Contact Nice® engineering for details.

GREASES

Manufacturer	Product Trade Name	Temperature Range °F (°C)
Chemtool	Duralube EP 2	-20 to +250 (-29 to +121)

Shell	Alvania #2	-40 to +284 (-40 to +140)
Shell	Alvania #3	-40 to +284 (-40 to +140)
Shell	Darina EP2	-40 to +320 (-40 to +160)
Shell	Aeroshell 14	-65 to +250 (-54 to +121)

Retainers/Cages

Nice® precision ground ball bearings of standard production are fitted with snap-in ball riding retaining cages made from heat stabilized polyamide 6/6. For special applications or design requirements cages made of special materials can be supplied. These include pressed steel or stainless steel, glass reinforced polyamide 6/6, and brass. Availability of bearings fitted with non-standard cages should be checked before ordering.

Axial Load Capacity

Deep groove ball bearings by nature of their design can carry axial loads either alone or in combination with radial loads. Axial load capacity of standard bearings is 0.5 times the Basic Static Load Rating, C_0 of that bearing. Smaller bearings should not be subject to a load greater than 0.25 times C_0 . Excessive axial loads can lead to serious reduction of bearing service life.

BEARING Engineering Data

Misalignment

Radial deep groove ball bearings do have the ability to accommodate a limited amount of angular misalignment. The amount of angular misalignment that can be tolerated before adversely affecting bearing performance is a function of a variety of parameters. Internal radial clearance, internal design, applied loads, and the size of the bearing all play a role in determining the bearing's misalignment capability. Because of this, exact values for allowable misalignment are not provided. Under normal operating conditions, a safe estimate of permissible angular misalignment is usually between .0005 in/in (.013 mm/mm) and .003 in/in (.08 mm/mm). Noise levels may increase when the bearing is operating misaligned.

Finish and Accuracy

Nice® ball bearings are available in several different finish and accuracy grades that may be selected to suit the functionality of a particular application.

Nice® fully ground precision bearings are available in single row radial configurations. Boundary dimensions and internal fit-up are held to exacting tolerances by precision grinding of all external surfaces and both ball grooves. These bearings are recommended for applications requiring quiet running, higher speeds, and applied loads. Normal tolerances for series 1600™, 7500™, 7600™, and ER bearings range from .0005" (.013 mm) to .001" (.03 mm). See product tables for exact tolerances.

Nice® functional precision and unground bearings are designed for those applications where speeds and loads are moderate, and running accuracy and noise requirements do not warrant a fully ground precision bearing. Single row radial, single row angular contact, and thrust ball bearings can be supplied in semi-ground or unground accuracy. Series 3000™, 6900™, 400™, 5000™, 500™, and 600™ bearings are available with functional tolerances that range from .005" (.13 mm) to .010" (.25 mm). See product tables for exact tolerances.

Seals and Shields

Contact seals are used on bearings to prevent solid contaminants and moisture from entering the bearing while retaining the lubricant in the bearing. Nice® design and field experience has resulted in a variety of heavy duty and effective sealing designs.

The Nice® RS1P seal, which is standard on the 1600™, 3000™, and 6900™ Series Bearings, is made of oil and wear resistant synthetic rubber with a steel reinforcement. The sealing action is accomplished via interference (deflection) of the seal lip against a recess in the inner ring shoulder. The outside diameter of the seal is retained in a recess groove cut into the outer ring. The DC seal is an old style multi-part assembly consisting of a nylon seal insert held in place with a metal shield. It is a cost effective seal used only on a few sizes and specials. The Nice® DL and Super Ag seals are special high efficiency contact seals for heavy duty applications. They are constructed of synthetic rubber molded to the back of a metal shroud or guard. The seal lip rides in a labyrinth groove for reduced seal drag and lower torque against the inner ring land surface.

Bearings fitted with non-contacting metal shields are primarily intended for applications where the inner ring rotates and low drag torque is a requirement. They retain the grease at normal operating speeds and temperatures while protecting the bearing from contamination. Metal shields are also utilized in applications where contaminants may pose a threat to the seal materials.

BEARING Engineering Data

Radial Internal Clearance

All Nice® single row deep groove ball bearings are designed and produced with radial internal clearance to provide for optimum performance. Nice® ball bearings are supplied with "normal" radial clearance as standard, but can be ordered with radial clearance tighter than normal or looser than normal as a special item. The values listed in the table below apply to bearings before mounting and under no load and are supplied as a design guide. Consult Nice® engineering when ordering other than normal radial clearance.

RADIAL INTERNAL CLEARANCE (.0001) INCH (.001) mm				
PRECISION LEVEL SERIES / TYPE	NORMAL MIN.-MAX.	TIGHT MIN.-MAX.	LOOSE MIN.-MAX.	EXTRA LOOSE MIN.-MAX.

NICE® Special Ball Bearings

P/N: 6359VBF18 Special Features: Ball Thrust Bearing Zinc Plated Band Grease: Rust Preservative Typical Applications: Crane hook swivel 	P/N: 6990TNTG18 Special Features: Heavy section High capacity Grease: Shell Alvania 2 Typical Applications: Chain Bearing 
P/N: 7401VHA00 Grease: Exxon Polyrex EM Typical Applications: Commercial washing machine brake solenoid 	P/N: 7436TNTG18 Special Features: 5/8" Hex Bore Grease: Shell Alvania 2 Typical Applications: Commercial mower drives 
P/N: 8070VTE00 Special Features: Radial Ball Bearing Zinc Plated Grease: Shell Alvania Grease 2 - 1/3 Full Typical Applications: Moveable carriage sections for meat saws 	P/N: 8220TNBF18 Special Features: Stainless steel Grease: Rust Preservative Typical Applications: Moveable carriage sections for meat saws 
P/N: 8025VTE18 Special Features: Full complement radial ball brg Grease: Shell Alvania 2 Typical Applications: Lawn mower 	P/N: 8317TNTG00 Special Features: Polyurethane molded tire on OD Grease: Shell Alvania 2 Typical Applications: Bottle inspection machinery 

P/N: 84061TNPS18 Special Features: Stainless steel races Heavy duty seals Grease: Exxon Nebula #2 Grease Typical Applications: Compacter roll for textile machinery  Interchanges: Fafnir® P/N: A201NPP5 A1116	P/N: 8435VBF00 Special Features: Single row unground Combination Radial & Thrust Bearing Machined inner ring Grease: Rust Preservative Typical Applications: Mechanical door closers 
P/N: 8425TNRLDBF00 Special Features: Special internal clearance Grease: Rust preservative 	P/N: 8426TNRLCBF00 Special Features: Special internal clearance Grease: Rust Preservative 
P/N: 8457JUE00 Special Features: Steel retainer Grease: Chevron SRI Typical Applications: Locomotive fuel solenoid 	P/N: 8458TNUE00 Grease: Chevron SRI Typical Applications: Locomotive fuel solenoid 
P/N: 8736AXX71 Special Features: Urethane tire Zinc plated Typical Applications: Packing machine 	P/N: 8755ADCXX00 Grease: Chevron SRI Typical Applications: Drawer guides 

Fafnir is a registered trademark of Timken.

P/N: 8224TNNT00

Special Features:
Track wheel configuration
on the OD.
4 point angular contact

Grease:
Chevron Dura-Lith EP2

Typical Applications:
Guide bearing for radial arm saw

P/N: 84332TNTG00

Special Features:
Low torque
Teflon™ seals

Grease:
Shell Alvania 2

Typical Applications:
Wire guide

P/N: 84382TNTG00

Special Features:
Low torque
Teflon™ seals

Grease:
Shell Alvania 2

Typical Applications:
Wire guide

P/N: 8459DSTNHA00

Grease:
Exxon Polyrex EM

Typical Applications:
Track roller for automatic
sliding doors

P/N: 8490TNNT00

Special Features:
Track wheel configuration
on the OD.
4 point angular contact

Grease:
Chevron Dura-Lith EP2

Typical Applications:
Guide bearing for radial arm saw

P/N: 8727DCJN20XX24

Special Features:
Steel retainer

Grease:
Solid polymer lubrication

Typical Applications:
TIG welder wire guide

P/N: 8741ADSUD24

Special Features:
Harden outer

Grease:
Mobilgrease 28

Typical Applications:
Wire pulley for medical imaging machines

P/N: 8752ADCN65XX24

Special Features:
Hard chrome plating

Typical Applications:
Wire guide

P/N: CB142TNTG18 Special Features: .456" Hex Bore Grease: Shell Alvania 2 Typical Applications: Warehouse Conveyor Rolls  Interchanges: Kilian® P/N: CB14-2	P/N: CB504TNTTE93 Special Features: .719" hexagonal bore Self Aligning Black Oxide Finish Grease: Shell Alvania 2 Typical Applications: Bulk Handling Belt Conveyors  Interchanges: MRC® P/N: CONV5043 Schatz P/N: CS3574X5
P/N: CONV3Y4TNTTE70 Special Features: Milled slot in OD for easy installation Fully enclosed dust shield Sealed for life High Load rating Zinc Plated Outer Ring Grease: Shell Alvania 2 Typical Applications: Material handling applications 	P/N: 74888TNTTE18 Special Features: Low torque seals 75% grease fill Grease: Shell Alvania 2 - 3/4 Full Typical Applications: Conveying equipment 3/4" Sprocket Idler Bearing  Interchanges: MRC® P/N: CONV4SZZ2 NDH® P/N: Z9504B Schatz P/N: CS3564X3 Fafnir® P/N: 204RR6
P/N: 6939VBF00 Special Features: Stainless steel band & dust shield Full complement 3/32" x 45 threaded stud 1/4" pipe tap in stud end Grease: Rust Preservative Typical Applications: Bulk material knife gate valve 	P/N: 7213VBF00 Special Features: Stainless steel band & dust shield Full complement 3/32" x 45 threaded stud 1/4" pipe tap in stud end Grease: Rust Preservative Typical Applications: Bulk material knife gate valve 
P/N: 8749VN35BF73 Special Features: 1 piece cup made of bearing quality steel Increased cross section Stainless steel balls Corrosion resistant coating Grease: Rust Preservative Typical Applications: Ball transfer decks for cargo handling

P/N: 5971JBF03 Special Features: Ball Thrust Bearing Retainer version Grease: Rust Preservative 	P/N: 6051VBF53 Special Features: Ball Thrust Bearing Grease: Rust Preservative 
P/N: 6359V4L4L00 Special Features: Ball Thrust Bearing Zinc Plated Band Grease: Shell Alvania 2 	P/N: 70319VPS18 Grease: Exxon Nebula #2 Typical Applications: Hay baler 
P/N: 703110VPS18 Special Features: Black oxide coated inner ring Grease: Exxon Nebula #2 Typical Applications: Hay baler 	P/N: 71144VMJ18 Special Features: Ball thrust bearing Full complement Grease: Shell Alvania 3 Typical Applications: Hay baler 
P/N: 7484VBF00 Special Features: Ball thrust bearing Full complement Typical Applications: Hay baler 	P/N: 74888TNNRLDMJ18 Special Features: 3/4" ground bore Single lip seal with steel shield Radial play .0014"- .0018 Grease: Shell Alvania 2 - 3/4 Full Typical Applications: Mower spindle Interchanges: Fafnir® P/N: P204RR6 BCA® P/N: 204BBAR 

Fafnir is a registered trademark of Timken. BCA is a registered trademark of NTN.

NICE® Special Agricultural Bearings - Continued

P/N: 78427TNHB18 Special Features: Extended inner ring version Carburized steel inner ring Grease: Exxon Polyrex EM Typical Applications: Hay baler 	P/N: 78685TNHR53 Special Features: Extended inner ring version Contact seals with steel shield Grease: Exxon Unirex N2 Typical Applications: 5/8" Sprocket idler bearing  Interchanges: Fafnir® P/N: 203KRR2 BCA® P/N: 203RRAR10
P/N: 7997VTG00 Special Features: Extended inner ring Pin holes for installation Grease: Shell Alvania 2 	P/N: 8191TNTE18 Special Features: 9/16" Hex Bore Grease: Shell Alvania 2 Typical Applications: Mowing Equipment 
P/N: 82121TNMJ00 Special Features: Extend inner ring 2 11/16" dia holes 180° apart Grease: Shell Alvania 3 Typical Applications: Hay baler rake tine bar shaft support  Interchanges: Fafnir® P/N: BB9105KRR2	P/N: 8280TNMR00 Special Features: Grease: Eastern Oils - Ford M1C233A Typical Applications: Steering 
P/N: 8386TNGMBMJ00 Special Features: Grooved outer ring Zinc plated Grease: Shell Alvania 3 Typical Applications: Hay baler wire guide 	P/N: 8418TNMJ18 Special Features: Flanged radial ball bearing Grease: Shell Alvania 3 Typical Applications: Lawn mower drives 

Fafnir is a registered trademark of Timken. BCA is a registered trademark of NTN.

P/N: 8738VBF00 Special Features: Acetyl 500 outer ring Stainless steel inner ring Grease: Rust Preservative Typical Applications: Carriage assembly chicken processing equipment 	P/N: 70313VPS18 Special Features: 3/8" -24 UNF 2 Threads Straight OD Grease: Exxon Nebula #2 Typical Applications: Hay baler  Interchanges: BCA® P/N: CF6032
P/N: 70316VPS18 Special Features: Ball bearing cam follower 3/8" -24 UNF 2A Threads Straight OD Grease: Exxon Nebula #2 Typical Applications: Hay baler  Interchanges: BCA® P/N: CF6672	P/N: 72275TNTE86 Special Features: Ball bearing cam follower 3/4"-16 UNF 2A Threads Internal 3/8" hex slot in stud Grease: Shell Alvania 2 Typical Applications: Hay rake tine bar  Interchanges: Replaces Nice® P/N 72274VTE86 BCA® P/N: TB7623
P/N: 8237TNTE86 Special Features: Ball bearing cam follower Internal 3/8" hex slot in stud 3/4"-16 UNF 2A Threads Grease: Shell Alvania 2 Typical Applications: Hay baler  Interchanges: Replaces Nice® P/N 8237VTE86 BCA® P/N: TB7624	P/N: 8389ATNPS00 Special Features: Ball bearing cam follower 3/8" -24 UNF 2A Threads Straight OD Grease: Exxon Nebula #2 Typical Applications: Hay rake tine bar 
P/N: 84031VPS00 Special Features: Ball bearing cam follower 1/2"-20 UNF 2A Threads Crowned OD to accommodate misalignment Grease: Exxon Nebula #2 Typical Applications: Hay rake tine bar  Interchanges: BCA® P/N: CF7811	P/N: 8469VTE00 Special Features: Ball bearing cam follower Internal 3/8" hex slot in stud 3/4"-16 UNF 2A Threads Grease: Shell Alvania 2 Typical Applications: Hay rake tine bar

Notes

This image shows a full page of white paper with horizontal blue ruling lines. The lines are evenly spaced and run across the width of the page, providing a template for writing or drawing. There are no margins, text, or other markings on the paper.

Innovation. Commitment. Quality.

RBC Bearings has been producing bearings in the USA since 1919. In addition to unique custom bearings, RBC offers a full line of standard industrial and aerospace bearings, including:

Spherical Plain Bearings

Radial, angular contact, extended inner ring, high misalignment. QuadLube®, ImpactTuff®, SpreadLock® Seal, CrossLube®, DuraLube™, and self-lubricating bearings. Available in inch and metric sizes.

Thin Section Ball Bearings

Standard cross sections to one inch. Sizes to 40 inches. Stainless steel and other materials are available. Seals are available on all sizes and standard cross sections. Super duplex configurations.

Tapered Roller Bearings

Tyson® case-hardened and through-hardened tapered roller bearings. Available in many sizes. Used in Class 8 heavy truck and trailer wheel bearings, gear boxes, and final drive transmissions.

Tapered Roller Thrust Bearings

Case-hardened. Sealed and unsealed for truck, tractor, and construction equipment steer axles, and Class 8 trailer landing gear.

Ball Screws

Precision ground, rolled, ball splines. Long life, low wear, high accuracy. QuickTurn® Ball Screw Repair Service.

Integrated Assemblies

For robots and other process tool applications. Engineering design assistance. Production volume capacity.

Cam Followers

Standard stud, heavy stud, yoke type, caged roller followers. Patented RBC Roller® cylindrical roller cam followers, HexLube® universal cam followers, airframe track rollers.

Needle Roller Bearings

Pitchlign® caged heavy duty needle roller bearings, inner rings, TJ TandemRoller® bearings for long life.

Self-Lubricating Bearings

Radial, thrust, rod ends, spherical bearings, high temperature, high loads. Available in inch and metric sizes. Fiberglide® self-lubricating bearings.

Airframe Control Bearings

Ball bearing types, self-lubricating types, needle roller track rollers.

Dowel Pins, Loose Needle Rollers, Shafts

Precision Products dowel pins, loose needle rollers, and shafts.

Commercial Rod Ends

Commercial and industrial, precision, Mil-Spec series, self-lubricating, and aircraft. Sold under the Heim®, Unibal®, and Spherco® brands. Available in inch and metric sizes.

Ball Bearings

Precision ground, semi-ground, unground. High loads, long life, smooth operation. Nice® ball bearings are offered in caged and full complement configurations.

Specials

RBC manufactures many specialty bearings for the aerospace, oil and energy, semiconductor equipment, packaging, transportation, and other industries.
