## ADVICE FROM A PROFESSIONAL

### Removal / Fitting of a pulley DAMPER

(source : Doc Metaldyne)

#### Usable temperature range:

140°C maximum for intermittent use /  
120°C continuous duty  
- 40°C lowest for starting

#### ASSEMBLY:

- Avoid any impact to the drive edge face of the pulley, where contact with the belt or timing gear is made, care should be taken with the adjuster bolts and accessory belts, to prevent over tightening, belt wear and oil seal leakage.
- Do not exceed the maximum tightening torque of the locating screw (a risk of fracture or distortion).
- Do not use without the accessory belt.

#### REMOVAL:

- Do not use an extractor, screwdriver, or other means putting load on the ring.
- Do not heat the part to remove it: no burner, blowtorch, or any other source of heat (a risk of deterioration to the rubber, distortion of the assembly dimensions or flatness...).
- Do not use any new part which suffers an impact (e.g. fallen parts) since it can no longer be functional.
- Do not handle the parts without clean dry gloves, in order to avoid the risks of oxidation.

#### STORAGE:

Store the parts in specific containers and packing, to protect from contamination and moisture.

*Avoid any contact with oil, solvents, acid, or varnish (a risk of deterioration to the rubber)*

### Montage / Démontage d'une poulie DAMPER

(source : Doc Metaldyne)

#### Températures d'utilisation maximum :

140°C en pointe / 120°C en continu  
- 40°C au démarrage

#### MONTAGE :

- Proscrire les chocs sur la face en contact avec le pignon de distribution, la portée de vis, la portée de joint et la courroie d'accessoires (risque de mauvais serrage, de fuite, d'usure de la courroie).
- Ne pas dépasser le couple de serrage maxi de la vis de fixation (risque de fissuration ou de déformation).
- Ne pas utiliser sans courroie d'accessoire.

#### DÉMONTAGE :

- Ne jamais utiliser un extracteur, tournevis ou autre moyen prenant appui sur l'anneau.
- Ne jamais chauffer la pièce pour la démonter : pas de décapeur thermique, chalumeau ou autre source de chaleur (risque de dégradation du caoutchouc, déformation du diamètre de montabilité, planéité ...).

Toute pièce neuve ayant subi un choc (pièce qui tombe, pièces choquées entre elles..) n'est plus fonctionnelle et ne doit pas être utilisée.

Pour éviter les risques d'oxydation, les pièces doivent être manipulées avec des gants propres et secs.

#### STOCKAGE :

Les pièces doivent être stockées dans des containers et emballages spécifiques, à l'abri des agressions extérieures et à l'abri de l'humidité.

*Eviter tous contacts d'huile, de solvant, de carburant, d'acides ou de bases (risque de détérioration du caoutchouc)*
